<b>Project title (ENG):</b>	<b>New methodology for the assessment of ecologic risk based on Rough Set Theory with applied example on the Olt river.</b>
<b>Project title (RO):</b>	<b>Metodologie noua de evaluare a riscului ecologic bazata pe Teoria Multimilor Rugoase cu exemplu de aplicare pe raul Olt</b>
<b>Duration</b>	2009-2012
<b>Team Leader</b>	Senior Research Eng. Georgeta Madalina Arama
<b>Summary</b> (short description) ENG	The project applied the Rough Set Theory in applications for the assessment of environmental impact/risk for the water bodies using information selected from the INCD-ECOIND Bucharest monitoring databases. The development of the general conceptual model has been done for the water bodies as they are defined in the national and European legislation. Specific conceptual models have been derived from the general one for the environmental impact/risk assessment brought by hazardous substances discharged in the sewage systems. The project realized also the automated calculus spread sheets with data for the Olt river (five consecutive monitoring years) and for the sewage system of Bucharest city (two consecutive monitoring years). Procedures and user manual for methodology application have been realized. The methodology is able to assess the increase /decrease of the premises of the negative consequences of pollution and consequently of the environmental risk.
<b>Summary</b> (short description) RO	Proiectul a urmarit aplicarea Teoriei Multimilor Rugoase in aplicatii de evaluare a impactului/riscului de mediu pentru corpurile de apa folosind informatii selectate din bazele de date de monitorizare existente in cadrul INCD-ECOIND Bucuresti. Dezvoltarea modelului conceptual general s-a facut pentru corpuri de apa asa cum sunt ele definite in legislatia Europeana si nationala. S-au realizat de asemenea modele conceptuale particulare deduse din cel general pentru evaluarea impactului/riscului de mediu adus de substantele periculoase deversate in canalizari. Proiectul a cuprins realizarea fisierelor de calcul automat cu date pentru raul Olt (monitorizare cinci ani consecutivi) si pentru canalizarea municipiului Bucuresti (monitorizare doi ani consecutivi). Au fost realizate proceduri si manuale de utilizare pentru aplicarea metodologiei. Metodologia este capabila sa evaluateze cresterea/scaderea premiselor consecintelor negative produse de poluare si in consecinta a riscului de mediu.
